

**Project:
Allied/BFI Landfill Expansion**

Location: Niagara Falls, NY

**Client:
Allied Waste Systems**

**Contact:
Mr. David Grenier, Allied
716-285-3344**

**Performance Dates:
November 2005 - August 2006**

Detailed Project Description

The construction of this landfill illustrated the joint effort between regulatory agencies and private business to remediate industrial contaminated areas.

Over two million cubic yards of lime sludge and slag created during the acetylene making process was relocated into an active, lined landfill.

Tug Hill Construction has been awarded multiple contracts to remediate existing areas and construct double lined composite landfills within the footprint of the previously contaminated area.

Tug Hill Construction specializes in thorough and comprehensive environmental clean up solutions for both public and private sector clients.

Our work portfolio includes landfill capping, landfill construction, HAZMAT sight cleanups, wetland restoration and mitigation, storm water system upgrades, and similar type projects.
