

**Project:
Honeywell Alltift Remediation**

Location: Buffalo, NY

**Client:
Honeywell International, Inc.**

**Contact:
Mr. John Mojka, Honeywell
973-455-2721**

**Performance Dates:
November 2003-August 2005**

Detailed Project Description

The Alltift Remediation project located in Buffalo, NY included the consolidation of hazardous waste to reduce the contaminated footprint from 50 acres to 22 acres. The project included:

- ◆ Placing an impermeable synthetic lined cap over the 22 acre landfill site.
- ◆ Installing barrier walls and collection trenches around the perimeter of the landfill to collect contaminated groundwater from the landfill site.
- ◆ Stabilizing and cleaning of contaminated sediments from adjacent wetlands, which were then replanted.

Wildlife Preservation

During the remediation of the wetlands Tug Hill Construction rescued and relocated over 200 turtles.

Safety

Community air monitoring was implemented to protect neighboring residents and workers.
