

**Project:  
Fort Drum Parallel Taxiway J at  
Wheeler Sack Army Airfield**

**Location: Fort Drum, NY**

**Client:**

**US Army Corp of Engineers, New York**

**Contact:**

**Mr. Anthony Felder,  
USACE (315) 772-2103**

**Performance Date:**

**2004**

**Construction Value:**

**\$9.5 million**

## **Detailed Project Description**

This contract required Tug Hill Construction to connect a 9,000 linear foot taxiway parallel to an existing 10,000 linear foot runway to support operations at Wheeler Sack Army Airfield.

Tug Hill Construction crews self-performed the contract which involved the manufacturing, local transport and placement of 40,000 cubic yards of reinforced 700 psi flexural strength concrete.

All associated utility relocation, piping, signage and new utilities were included in this single season contract.

Tug Hill Construction assembled and utilized an on-site plant in order to accommodate fast-paced construction of the taxiway for the U.S. Army at Fort Drum.
